EXECUTIVE SUMMARY

Department of Energy Material Storage Area (DMSA) C-335-05 is located on the north side of the C-335 process building. Its boundaries are **columns F32/33-S32/33**. The DMSA occupies approximately **6900** square feet (ft²). This DMSA is also classified as Solid Waste Management Unit (SWMU) **#301**. DMSA C-335-05 was used for years as a storage area for heterogeneous material such as process equipment, drums of oil, ladders, scrap metal and wooden items. The process equipment included items such as recycle and converter coolers, bellow assemblies, flanges, large piping and expansion joints. The area was also used to store several B-25 boxes filled with miscellaneous material. The equipment/material in the area had an estimated volume of **9,741** cubic feet (ft³) with a weight of approximately **238,315** pounds (lbs). United States Enrichment Corporation (USEC) personnel, prior to initiation of the current characterization program, had completed Nuclear Criticality Safety (NCS) characterization of a large quantity of the equipment and material in this DMSA. Documentation of the USEC characterization is provided in this report with the pertinent Request for Disposal (RFD) forms. Current characterization activities began in July 2001 and were completed in February 2002. To facilitate material movement and identification, the DMSA was divided into zones during the characterization program. All of the materials originally identified in the DMSA remain in the DMSA with the exception of Resource Conservation Recovery Act (RCRA) hazardous waste and several Toxic Substance Control Act (TSCA) regulated asbestos containing materials (ACM) which were transferred to RCRA permitted storage facilities. Information pertaining to specific waste categories is provided in the pertinent subcategories below. Photographs were taken of DMSA items as well as general views of the area prior to and after the Characterization program. Several of the photographs are included in this report. This DMSA was originally classified as a Phase 2 DMSA since it was known to contain fissile or potentially fissile items and the materials in the **DMSA** had not been fully characterized. Although the material in the DMSA has now been characterized, the area will remain a Phase 2 DMSA since several fissile items are stored in Fissile Control Areas (FCAs) within the DMSA.

RCRA/MIXED

Two incandescent light bulbs and an aerosol can of starter fluid were discovered in DMSA C-335-05 and classified as RCRA/Mixed wastes. The items were packaged, labeled and transferred to the appropriate RCRA permitted storage facility. The light bulbs were stored at C-752-A while the starter fluid was stored at C-733, which is permitted for ignitable wastes. RCRA hazardous wastes are identified when found as “newly discovered” or “newly generated” wastes. Newly discovered wastes are those hazardous wastes that are found loose or not installed in equipment such as aerosol cans or a light bulb lying on the floor. Newly generated wastes are hazardous wastes that must be removed from equipment such as circuit boards or oil drained from a pump. The RCRA wastes in DMSA C-335-05 were classified as newly discovered. The hazardous waste classifications are noted on the “Waste Identified for Removal” section of this report.

TSCA-PCB/ACM/LLW

There were no polychlorinated biphenyl (PCB) wastes identified in C-335-05. Several pieces of asbestos cloth/material were identified as ACM and abated. These items were packaged, labeled and transported to the C-752-A facility. One large piece of equipment with asbestos was labeled and packaged in an ST-90 box. The box remains in the DMSA. Due to the radiological contamination of the asbestos items, these wastes were also classified as ACM/low level wastes (LLWs).

NCS

Several items in DMSA-335-05 were classified as Nuclear Criticality Safety (NCS) spacing controlled fissile items. The fissile items include five process coolers, an expansion joint and an expansion joint with bellows. These items are managed in NCS Fissile Control Areas (FCAs) established within the DMSA.

LLW

All of the wastes that remain in the DMSA, with the exception of seven pallets of unused reusable oil, have been classified as **LLW**. The waste types vary from large process equipment such as converters, coolers, condensers and expansion joints to smaller metal items such as pipes, copper tubing and fans. Several wooden items were

also identified. Several B-25 storage boxes were identified as containing miscellaneous scrap material. All equipment and items were given bar code identification for future inventory control and equipment location references.

REUSABLE MATERIAL

Twenty-eight 55-gallon drums of unused Sunad oil were classified as reusable material. These drums are stored on pallets (four drums per pallet) and remain in the DMSA. Additional information pertaining to this material is included in the Reusable Material inventory.

IH

All Industrial Hygiene (IH) data have been reviewed. All quality control samples were within normal acceptable guidelines. No personnel were exposed to any airborne concentrations above a permissible exposure limit (PEL) or threshold limiting value (TLV).

HP

Health Physics (HP) surveys conducted included smears, direct readings, and air samples. According to the radiological results, the highest total alpha contamination noted in the DMSA was 99,701 disintegrations per minute (dpm) per 100 square centimeters (cm²). This reading was from a "00" converter R-114 cooler. The highest total beta/gamma reading was 6,722,000 dpm/100 cm² from a 12" pipe expansion joint.

SAFETY

There were no safety related events during the characterization program. Pre-job briefings were held with all entry and support personnel to ensure that individual responsibilities and authorities were understood. A safety officer was in attendance during all phases of work to evaluate conditions and provide safety related input to workers. All workers had stop work authority to ensure unusual or unexpected events were evaluated before work was allowed to proceed.
